[Heat Drying](#)

Save-the-date! Cousino Harris, Restoration Mechanical and Perrysburg Floor Covering's 10th annual charity golf outing scheduled for August 17th. Invitations will be mailed soon. We are very proud to be supporting Hannah's Socks. Hannah was spotlighted in the February 9th issue of People Magazine for "Heroes Among Us" in conjunction with her appearance on The Oprah Show May 19th, "Heroes in Hard Times". Hannah is 9 years old and lives in Perrysburg. You can read about this amazing child/organization by visiting www.Hannahssocks.org and you can meet her at our golf outing as she will be riding around on the golf cart with me for the day! Hope to see you there! Shelly Konz

Video Conferencing at Cousino Harris

Meeting with a colleague isn't always as easy as driving across town. With the corporate world expanding, it is difficult but essential to develop relationships from a distance. Cousino Harris offers video conferencing rental for your next business meeting! Our main office in Perrysburg is set up with a quiet conference room and a video experience that is of the highest quality. Affinity VideoNet has crisp audio and clear picture to give a feel of professionalism so you can deliver a PowerPoint or edit a document in real time. With the help of Affinity, we can help your communication needs.

We offer two large TVs for multiple connections, seating for 12, a dry erase board with large tablets of presentation paper, complimentary coffee maker and small dinette area for lunch.

To schedule a video conference at Cousino Harris, contact Affinity VideoNet at 800.370.7150 or fill out a request sheet at

www.AffinityVideo.net.

	9:00 pm - 6:30 am	Monday - Friday	\$200/hour
	Weekends and Holidays		\$200/hour

High Speed Heat Drying

Normal dryout time for a wet building can take 3, 4, 5 or more days. High speed heat drying is a newer process that adds air movement resulting in faster evaporation. Air exchange is a well known method for removing large quantities with dry, hot air, drying a structure faster than a dehumidifier. If done properly this could save insurance companies from paying for secondary damages done with slower drying techniques and can dry structures without removing baseboards, tile, cove base, cabinets, etc. Heat creates a more arid environment by making the air 'thirsty' and allowing it to absorb more moisture. Thermostatically controlling the heat keeps the heat in proper range for optimum drying. Complete drying usually occurs within 48 hours.
